

Port Scan Report

Scan ID smoke · Target localhost (→ 127.0.0.1) · Mode tcp_connect · 2026-09-21T02:44:28

Executive Summary

Ports scanned	Open ports	Duration	OS fingerprint
100	5	0.0s	n/a

Open Ports

Port	State	Service	Version / Banner	Risk
22	OPEN	ssh	OpenSSH 9.2	medium
80	OPEN	http	nginx 1.24	medium
445	OPEN	microsoft-ds	-	critical
443	OPEN	https	Apache 2.4	medium
3389	OPEN	ms-wbt	-	high

Risk Findings

Port	Service	Version	Risk	CVE hints
22	ssh	OpenSSH 9.2	medium	CVE-2023-38408 (OpenSSH ssh-agent RCE), CVE-2016-6
80	http	nginx 1.24	medium	CVE-2021-23017 (DNS resolver vuln)
445	microsoft-ds		critical	CVE-2017-0144 (EternalBlue SMBv1)
443	https	Apache 2.4	medium	CVE-2021-41773 (path traversal / RCE)
3389	ms-wbt		high	-

Methodology & Disclaimer

Technique: tcp_connect. TCP Connect completes the full three-way handshake and is logged by the target; SYN scans never complete the handshake but require raw sockets. Filtered ports are ambiguous (firewall drop vs no response). Versions come from banners and may be inaccurate. Authorized scanning only - scanning systems without permission is illegal in most jurisdictions.
